

Eyelet Hinge Kit

Installation Guide for the Eyelet Hinge Kit
Each Kit is Suitable For a Hinge up to 2.4m

WARNING

FOR YOUR SAFETY – This product must be installed and serviced by a qualified pool professional in accordance with applicable national, state, and local codes and standards. Before installing this product, read and follow all warning notices and instructions that accompany this product. Failure to follow warning notices and instructions may result in property damage, personal injury, or death. Improper installation and/or operation may void the warranty and may result in hazards which could cause serious injury or property damage. This product is not intended for use by persons (including children) with reduced physical, sensory, or mental capabilities, or those lacking experience and knowledge, unless they have been given supervision or instruction concerning use of the product by a person responsible for their safety. Children should be supervised to ensure they do not play with the product.

ATTENTION INSTALLER – This manual contains important information about the installation, operation and safe use of this product. This information should be given to the owner/operator of this equipment.

Section 1. Tools Required

PROTECTIVE
BACKING
Timber or Plastic

PENCIL/PERMANENT
MARKER

TAPE MEASURE

HAMMER

SUITABLE PPE
PPE should be worn
while assembling/
installing product

Section 3. Installing the
Eyelet Hinge Kit

1. Prepare the covers

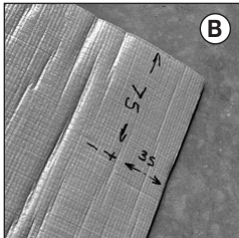

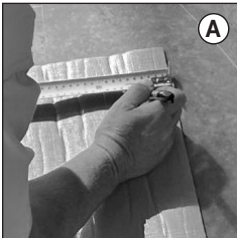

1. Identify both ends of the thermal cover that will be connected using the eyelet hinge.
2. Ensure that both covers fit appropriately on the pool. Confirm that no further trimming is required before proceeding to the next step.

Step 2. Mark the outer holes (A) (B)

3. Using a pencil or permanent marker, clearly mark the locations for the outermost holes on each cover as follows:
 - Measure **35mm** in from the edge of the cover.
 - Measure **75mm** in from the end of the cover.

Step 3. Mark additional holes (C)

4. Measure the distance between the two outermost holes you've marked.
5. Determine the number of additional holes needed, ensuring they are evenly spaced, no more than **600mm** apart, and **35mm** from the cover's joining edge.
6. Mark the hole locations on both covers, ensuring they are parallel for consistent alignment.

Section 2. Supplied Parts

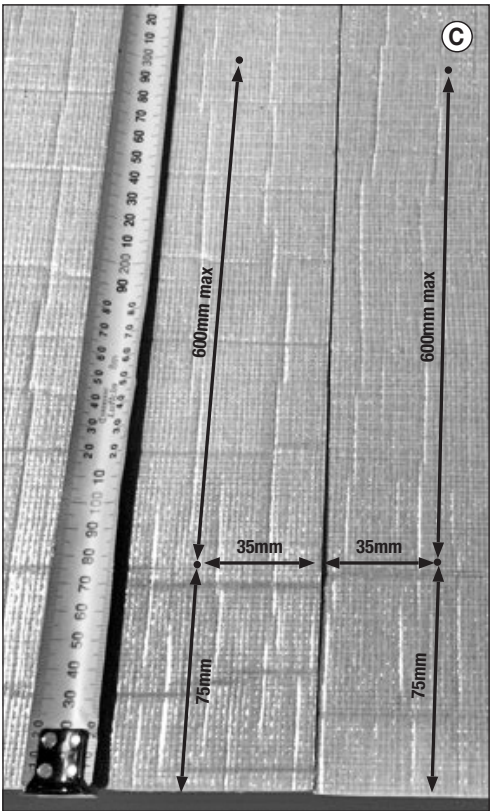

METAL PUNCH X 1

4mm CORD X 5

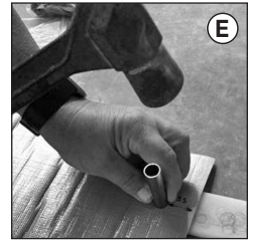

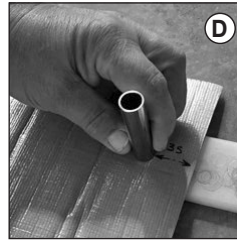

EYELETS X 10

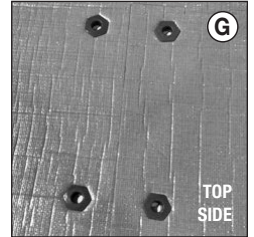

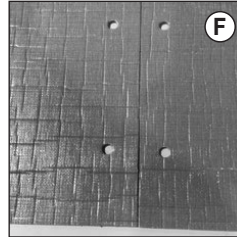

Step 4. Punch the holes ④ ⑤ ⑥

7. Place a piece of protective backing (such as timber or plastic) underneath the cover to prevent damage to paving or decking.
8. Then take the metal punch supplied and using a hammer, tap the bevelled end of the punch into the marks you previously made on the cover.

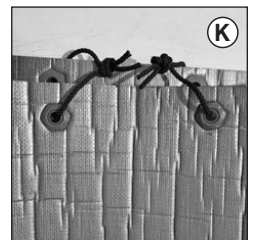

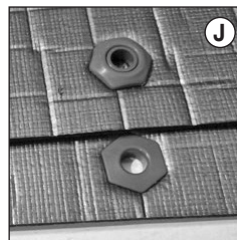

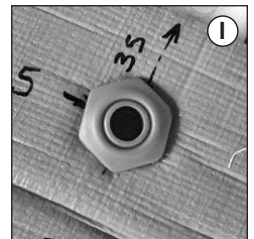

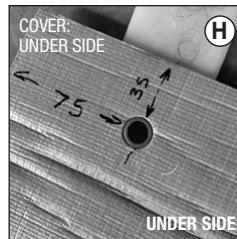

Step 5. Attach the eyelet

9. Place the male half (flange side) of the black plastic hexagon eyelet through the holes from the top side of the cover. Fold the edge of the cover over to expose the underside ⑦ ⑧.
10. Snap the female half of the eyelet onto the male half, and gently tap them together with a hammer until secure ⑨.
11. Repeat for all holes.

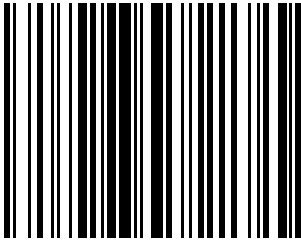

Step 6. Attach cords to create the hinge

12. Fold the 2 pieces of thermal cover together, so that the male sides of the eyelets are on the inside and the female sides are facing outwards ⑩.
13. Thread a 4mm cord through the opposing eyelets and secure it with a knot, ensuring the loop is not too small ⑪.
14. Repeat this process for all eyelets, making sure each loop is the same length to create a consistent and secure hinge for the pool cover.
15. These steps should leave the knot position underneath the cover, hidden from view.
